

SPINDLE POT, T-KEY, EXTENSION

Accessoires

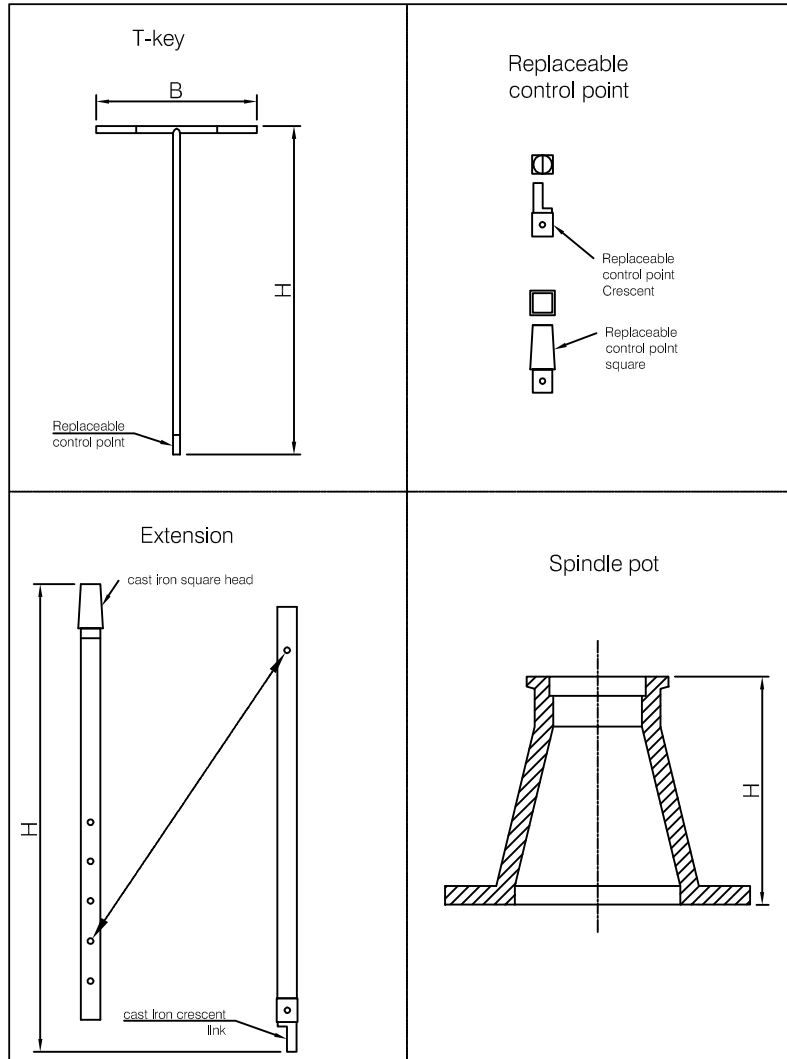

PRODUCT DESCRIPTION

ESEP spindle pot, T-key and spindle extension, **series accessories**, are used in situations where a deeper operating point needs to be reached. The combination is ideally suited for, for example, opening and closing a spindle valve. The spindle pot provides a pass-through possibility in a concrete deck, where the T-key and, if necessary, the spindle extension, ensure the actual operation.

APPLICATION

The spindle pot ensures a neat passage of the **ESEP** T-key. The spindle extension is an extension of a control point at greater installation depth. The T-key serves to open or close the spindle valve.

DRAWING

QUALITY

All **ESEP** spindle valves can be operated with a T-key

Material spindle pot:

- Body polyethylene
- Lid cast iron

Material spindle extension:

- Cast iron

Material T-key:

- Cast iron
